Harshavardhan Kuthadi

Product Engineer | Tempe, AZ

hkuthadi@asu.edu | github.com/harsha0602 | linkedin.com/in/hkuthadi | Portfolio

I build software for compliance teams at Pretorin. I also co-founded TappedIn, a music app with over 1,000 users.

EXPERIENCE

Pretorin | Product Engineer

May 2026 to Present | Tempe, AZ

Full-time Product Engineer since September 2026; previously an intern from May to August 2026.

- Own development of Compliance Claw and the in-app assistant that helps people navigate Pretorin and get support.
- Work on MCP hosting and plugins so people can use Pretorin's tools from OpenAI, Anthropic, and other AI clients.
- Build Python and FastAPI services that check permissions, look up relevant evidence, and keep responses linked to their sources. Add tests for denied access and prompt injection.
- Improve the agent development stack and CLI releases. Added signed packages, checksums, and software bills of materials; reduced macOS installation time from seven minutes to three.

TappedIn | Technical Co-founder

Nov 2025 to May 2026 | Remote, US

- Built artist discovery, user portfolios, trading, and account flows with React Native and Expo.
- Keep balance changes and trades in a single database transaction, with checks that prevent a repeated request from charging twice.
- Batch Spotify artist updates through a queue and retry failed requests. Added tests for the app, APIs, database permissions, and trading logic.

Handshake AI Solutions, LLC | AI Trainer - Computer Science Expert

Sep 2025 to Oct 2025 | Remote, US

- Wrote more than 50 prompts across computer science topics, including cases that required careful reasoning.
- Reviewed more than 100 model responses and gave specific feedback on incorrect claims, incomplete explanations, and code errors.
- Researched new evaluation topics and added questions that covered gaps in the existing tasks.

Amazon Web Services (AWS) | Software Development Engineer Intern

May 2025 to Aug 2025 | Seattle, WA

- Built AWS Glue jobs in Scala and PySpark to turn JSON and DynamoDB exports into partitioned Parquet on S3. Reduced data preparation time by about 95%.
- Moved prototypes into Scala, fixed crawler timing and job-bookmark issues, and adjusted compute settings to cut runtime by 50%.
- Set up infrastructure with AWS CDK and CloudFormation. Added CloudWatch alerts and dashboards for more than 100 active streams.
- Compared storage and processing options and wrote design documents covering costs, schemas, and partitioning.

EXPERIENCE, CONTINUED

o9 Solutions, Inc. | Software Development Engineer

Jul 2022 to Jul 2024 | Bengaluru, India

- Built configuration screens for visualization widgets so consultants could set up dashboards without writing custom code.
- Developed Git-style versioning and conflict resolution for tenant configurations used by more than 20 teams.
- Refactored Jasmine tests and the code they covered, removing more than 10,000 lines of duplicate code. Fixed frontend and backend bugs across releases.

OpenNets | Software Developer

May 2021 to May 2022 | Bengaluru, India

- Used Mininet, Node.js, and MongoDB to model and validate more than 10 network topologies.
- Built an AngularJS interface for editing settings and viewing network layouts.
- Added automated configuration checks to catch errors before running a simulation.

SELECTED PROJECTS

FluidFill | Nov 2025

FluidFill turns Word templates into forms. Upload a document, fill in the detected fields, and download a completed copy with the original formatting.

Realtime Study Rooms | Oct 2025

I built this study-room app and a tutorial for a software engineering course. People can join rooms, chat, see who's online, and make video calls in the browser.

Clozyt | Sep 2025

Clozyt lets people browse clothes by swiping: right to like, left to skip, and up for details. Their choices help decide what appears next.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C#, Java, Scala, C++, HTML, CSS

Frameworks/Tools: React, React Native, Next.js, FastAPI, Node.js, .NET, OpenAI Agents SDK, OpenClaw, PyTorch, scikit-learn, Docker, Git, GitHub Actions, pytest, Playwright, Vitest

Cloud/Databases: AWS, Azure AKS, PostgreSQL, pgvector, MSSQL, MongoDB, Supabase

EDUCATION

Arizona State University, Tempe, AZ | Master's in Software Engineering | GPA: 3.67/4

Aug 2024 to May 2026

National Institute of Technology Karnataka, Surathkal, India | Bachelor of Technology in Electronics and Communications Engineering

Jul 2018 to May 2022

ACHIEVEMENTS

Visual AI Hackathon Winner: Won with the Food Sage team at ASU. We built an app that scans food labels, extracts ingredients, and flags potential ingredient risks.

2x Performer of the Quarter: Awarded Performer of the Quarter twice at o9 Solutions.
